

Assembly aids for mounting of brake calipers, brake discs, brake drums and vehicle hubs.

BL 2

The BL 2 brake servicing crane is ideal for the simple and safe fitting and removal of brake discs, brake drums, brake calipers and complete hub assemblies weighing up to 200 kg. The crane is mounted on a trolley fitted with 4 casters. The maximum lift is 900 mm.

The brake components can be transferred safely and simply to a pallet or bench, or directly to a HUNGER brake drum turning machine for resurfacing. The brake servicing crane is particularly suitable for use in the restricted space below vehicle mudguards.

The HUNGER assembly aids facilitate

- a rapid, safe and expert fitting and removal of brake discs, brake calipers, vehicle hubs and brake drums,
- safe working conditions and reduced risk of injury (back injuries, including damage to vertebra discs) when handling heavy parts,
- cost-effective and efficient single handed fitting and removal of heavy components, even where access is difficult,
- use on almost any commercial vehicle brakes.

All brake discs and drums can be resurfaced off the car with any HUNGER brake drum servicing machine for commercial vehicles (see pages 2 to 7).

Accessories

The appropriate mounting accessory is fitted to the the brake servicing crane:

- lifting attachment HV 3 (pitch circle diameter 335, 275 or 245 mm),
- lifting tackles for calipers and
- universal sling.

Universal sling for brake calipers...

HV 3 lifting attachment with ECO brake drum.

...and brake discs complete with hub.

Lifting tackle for calipers.
